IBERMACH

**You explain the problem,
we provide the solution.**

IBERMACH SPECIAL MACHINERY, S.L.

company inside **ERLO GROUP**, was founded in 2009 by the society **IBARMIA UNIVERSAL, S.L. and ERLO, S.A.**, who have combined their knowledge in the world of drilling and tapping focusing their know-how to design and manufacture Special Machinery.

In 2013, **after acquiring Lizuan, IBERMACH** becomes in **hydraulic presses and broaching machine manufacturer**, what makes it one of the few **machining and deforming manufacturers**. IBERMACH offers everything you need in an **unique supplier**, from the **design** through our highly qualified and experienced team and own design and manufacturing facilities, including **after sales service**.

Because experience in an added value

Mision:

Satisfy all our clients needs as a hollistic / unique supplier.

Vision:

Become the second to known in the machining and deforming market.

Philosophy:

Grow improving along with our clients.

Experience:

Our more than 60 year in the drilling and tapping market, positions us as a reference in the sector.

Global:

Open borders and offer our solutions to the world

CSR:

Contribute with processes to improve the working conditions of the company and workers

Our method

IBERMACH

SOLUTION PORTFOLIO

IBERMACH product range includes the **design and manufacturing** of **taylor made solutions** flexible and adjustable to our client needs, requirements and specifications. In IBERMACH we provide an **integral project management**, backing our clients from the design of their needs to the commissioning and after sales service.

Our **portfolio** includes automatization of the production lines , robotized machining and deforming cells, high production machining centers, taylor made machines, dial / trunion / rotary transfer machines, thread quality checking systems, hydraulic presses, servo presses and hydraulic broaching machines.

MACHINES

CHARACTERISTICS

IBERMACH machining solutions imply four (4) product families; from multi-process transfer machines, machining centers for long benches, thread quality checking systems and; broaching machines and presses.

Multi process transfer machines reflect the strong effort and investment ERLO Group is making for the I+D. This product family has the capacity to cope from the simplest drill to the **most complex processes** such as boring, reaming, milling, threading or CSK.

With our XYZ modular assemblies, high-speed electro spindles, milesimal precision rotary plate, optical rulers chariots, rotating Hirth tooling and many other specifications, this type of machine offers the perfect solution for the most complex and demanding processes, in addition to achieving very high productivity.

Our **machining solutions**, offer **versatility** to design and manufacture adaptable solutions for each project, being our 5 decades in the sector our best argument.

This family is **ideal** for those companies that require a production automatization for simple machining processes, including more than 4m long pieces.

*This catalogue does not include the details of the presses and broaches.

Thread quality checking system, INTERCEPTOR

The first thread quality checking system
that IS infalible.

CHARACTERISTICS

The different problems that our customers have suffered in the **thread quality testing**, have led us to develop this solution, being the only one that we know is really **infallible**. With the Interceptor a before and after has arrived in the thread quality checking process.

INTERCEPTOR combines linear and rotating movements in a single integral solution that allows working with a higher level of control, comparing the values of linear position, rotational position and actual effort performed at each moment.

Similarly, we offer an **Intelligent Data Management Service** (Licensed Contracting Service) supported on a SAM 4.0 cloud platform, for continuous **traceability** that **prevents information loss, reduces maintenance costs and increases process knowledge** among many other benefits.

INTERCEPTOR vs COMMERCIAL SOLUTIONS

TESTIN METHOD	Functionality	Quality	Presence	Tool Wear	Pass control	Previous hole measurement
MANUAL TAMPON	●	●	●	●	●

SERVO PASS CONTROL	●		●		●	
INTERCEPTOR IBERMACH	●	●	●	●	●	●

POSSIBLE APPLICATIONS

Independent thread testing machine, to be integrated into working cell.

Thread testing system integrated into a transfer machine manufactured by IBERMACH.

Thread testing system as a production machine (we can thread and then check the quality).

Thread check system next to the productive machine (transfer) taking advantage of the robot feeding part.

AN EXAMPLE WORTH MORE THAN A THOUSAND WORDS

Our **thread checking system** has been **tested and on-site proved**. We know that it is reliable not only by the tests carried out by us, but by the testimonies and field applications, which are our best guarantee.

Testimonials and success cases are shown on [pages 22-23](#). You can view the tests performed by accessing our YouTube account.

SAMPLE 4
Hole with nominal diameter bigger than supposed

Automation and robotic systems

CHARACTERISTICS

IBERMACH robotic cells are the perfect complement for our machines, not only covering the needs of the design and the process, but **increasing the added value** of the whole by automating the solution.

ROBOTIC CELLS

AUTOMATIC FEEDING SYSTEMS

Hydraulic presses

CHARACTERISTICS

After **acquiring and integrating** the knowledge, technology and equipment of one of the most renowned companies of hydraulic presses in **2013, LIZUAN**, IBERMACH Special Machinery, S.L. takes over and adds to its portfolio this new range of products.

Providing greater added value, we have applied our own experience in machine tool design and manufacturing to various sectors and processes.

The **range of IBERMACH presses** ranges from standard to special presses, highlighting our flexibility in modifying and adjusting our standard presses to the needs of the customer.

HIGH PERFORMANCE MODULAR TRANSFER MACHINES

SECTOR

Automotive

APPLICATION

Direction Yokes multi machining

PROJECT AIM

Reduce the high investment cost needed in machining centres, while obtaining high production capacities.

SOLUTION

IBERMACH designed and developed a 7-station transfer machine with units in horizontal and vertical position to execute 5 machining processes (drilling, boring, reaming, chamfering and milling), resulting in a 6x faster solution and 50% cheaper than the machining center alternative.

In addition, we increased the added value of the solution with a design that allows greater flexibility in adjustment.

"For us ERLO Group has proposed the ideal solution to maximize the space getting the production we needed"

ÁLVARO BARBERO

Production Manager in CIE Automotive

HIGH PRODUCTIVITY DIAL TRANSFER

SECTOR

Automotive

APPLICATION

Stainless steel flange machining

PROJECT AIM

Design and manufacture of a rotary transfer machine composed of 8 stations with 7 independent machining units oriented in the required angles.

SOLUTION

IBERMACH implemented a fully parameterized system that allows the customer to deliver more than 1M units per year with zero thread defects, maintaining a processing time of 11 seconds.

In the IBERMACH rotary transfer, Elay S.L performs 7 simultaneous operations, reducing the cost of initial subcontracting by more than 1M€ and integrating the machining in its production facilities.

“The solution represented an incredible challenge in both technological and technical aspects. The experience has been positive and we have been collaborating with ERLO on more than one occasion since then”

FERNANDO NOGALES
Ex-Project Manager in ELAY S.L

MULTI DRILLING AND TAPPING FOR BIG DIMENSION PARTS

SECTOR

CSP Solar Energy

APPLICATION

Drilling CSP solar power plants tubes.

PROJECT AIM

Achieve optimum accuracy and quality level in the drilling process within a very limited workspace.

At the same time, achieve a reduction in production cycle time per part from 210 seconds to 97 seconds.

SOLUTION

IBERMACH designed and manufactured a fully automatic machine capable of loading, referencing and machining 25 holes simultaneously and unloading the part.

With this solution, the customer achieved a production of 250 tubes / day, increasing by 200% its original production and reducing cycle time by 50%.

"This machine has enable us to gain an order and become the supplier of a large project in Dubai, which is a great milestone for our company. In addition, it has allowed us to open our potential client scope."

"We are very pleased with the relationship with ERLO Group for its great professionalism, efficiency and close treatment"

RONAN ALLIBERT

CEO in Alliance Metal Changzhou Co. LTD - ArcelorMittal

SMALL DIMENSION MACHINING CELL

SECTOR

MIM Components

APPLICATION

Drilling, tapping and reaming of MIM components

PROJECT AIM

Due to the lack of repeatability of its two subcontractors, ALFA needed to standardize the drilling, threading and reaming processes of its MIM parts.

SOLUTION

Design and manufacture of a custom machining center with rotating table controlled by the Mitsubishi Motion system. Each part reference has its own program to repeat the same cutting conditions, regardless of the subcontractor using the machine.

With this solution, in addition to ensuring repeatability, ALFA reduced the cost per tool breakage by 50% and increased its billing by 20%.

"These two machines have allowed us to guarantee the same quality in the product received from our subcontractors.

These guarantees remove the uncertainty we had before.

We are very happy with the investment and any need we will talk with ERLO without hesitation"

ASIER AGUIRREBEÑA
CEO in ALFA Mim-Tech

ALFA | mim-tech
metal injection moulding technologies

PORTABLE DRILLING AND TAPPING MODULE

SECTOR

Solar Energy

APPLICATION

Drilling of tubes of photovoltaic panels.

PROJECT AIM

The challenge was to make the most of the customer's productive capacity by installing an appendix to their line. This will no longer depend on the reduced drilling capacity of your subcontract.

SOLUTION

IBERMACH designed and manufactured a fully automatic machine that collects parts directly from the manufacturing line. Then, simultaneously perform the necessary drilling processes before returning the part to the line.

In addition, reduction of transport and subcontracting costs to 0€, the customer has increased its production capacity by 150% and the margin/part by 20%.

"ERLO Group offered us an alternative to the high investment involved in a new production line.

This machine is our biggest secret today. We are studying new investments with the ERLO group"

Production manager of the company

CONFIDENTIAL

HIGH PRODUCTION IN MULTI-ANGULAR OPERATIONS

SECTOR

Automotive

APPLICATION

Multi-threaded in different angles of stainless steel components.

PROJECT AIM

The challenge was to develop a machine that would simultaneously perform three threading processes at three different angles.

SOLUTION

IBERMACH designed and manufactured a rotary transfer machine composed of 4 stations with 3 independent machining units and oriented in the required angles.

Together with the increase of the portfolio of possible parts, CortuGroup increased its threading capacity by 200% in addition to the profit per piece.

"Without this machine we would never have won the customer's order."

AITOR BARRIOLA
CEO in Cortugroup

LONG BENCH MACHINING CENTER (12M)

SECTOR

Automotive

APPLICATION

Truck chassis manufacturing

PROJECT AIM

Get an alternative to a high performance milling machine to be able to machine your chassis of long dimensions, investment that was not justified in terms of need / price

SOLUTION

IBERMACH provided JELCZ with a machining center capable of covering all references in a versatile, fast and more economical solution.

Including an ATC of 30 tools, IBERMACH increased the added value of the solution allowing JELCZ to mechanize other references, initially not contemplated, in the same center.

"With this machine we have been able to access more customers and expand our product portfolio.

An investment that is justified on its own in addition to an alternative to conventional machining centres"

VLADIMIR SLIZEWSKI
Commercial Director in Jelcz

HIGH-PRODUCTION MACHINING CENTRES

SECTOR

Oil & Gas

APPLICATION

Drilling and tapping of drilling tubes 12 meters long.

PROJECT AIM

Reduce manufacturing times from 7 hours to 1 hour per tube

SOLUTION

IBERMACH designed and manufactured a fully automated drilling and threading system that allows each piece to be completed within the specified time.

In addition, by design and analysis, the 1-hour target time was further reduced to just 37 minutes (+90%), providing TMC with a competitive advantage over its competitors.

"This custom solution was what we were looking for and we couldn't find it in other manufacturers around the world.

We found stronger machines that were too expensive; or cheaper machines that were too weak.

IBERMACH Special Machinery provided us with the perfect solution for our needs."

MIKHAIL PETRAYTIS
Commercial department in TMC

QUALITY CHECKING INSIDE A COMPLETE CELL

SECTOR

Automotive

APPLICATION

Thread quality checking

PROJECT AIM

The challenge was to create a system that would be able to verify the quality and core of each thread by detecting any type of error without going over the thread as other conventional methods do.

SOLUTION

IBERMACH designed, manufactured and integrated the first fully automated thread testing machine, INTERCEPTOR, which guarantees complete quality with impeccable results without overhauling or damaging the thread.

Bringing added value, we contemplate an Intelligent Data Management service supported on a SAM 4.0 cloud platform, for continuous traceability and its many benefits.

“The INTERCEPTOR has given us a measure of tranquillity and our customers and suppliers congratulate us. I would mention three concepts for this solution:

*Future, because our customers are demanding it and we have it.
Guarantee, because whatever we send out, we send in top form.
And economy, given that of the 6M parts checked to date so far we have 0 PPMs, so naturally we save money”*

MIKEL MUÑOZ
CEO in Mekar S.L

MECANIZADOS
MECAR

THREAD TESTER AS AN AUXILIARY MODULE

SECTOR

Automotive

APPLICATION

Thread quality checking

PROJECT AIM

The aim was to avoid rejection on the OEM assembly line.

SOLUTION

With a system installed in a Cartesian robot with three (3) controlled axes, IBERMACH responded to the need of BorgWarner.

Considering the lack of space within the assembly line, the XYZ assembly of the Cartesian robot allows to integrate the INTERCEPTOR into its line without having to modify it.

"It has been a pleasure to work with ERLO and the smooth relationship they have maintained with the other providers for the same line.

The reliability of the solution is amazing.

RUBEN LOPEZ
Production department in BorgWarner

CELL WITH AUTOMATIC FEED AND LOAD

SECTOR

Ironmongery and screws

APPLICATION

Cutting and threading of safety nuts.

PROJECT AIM

In addition to integrating the two processes into a single machine for all references, the customer was looking for a complete and versatile solution that did not require more investment in the future.

SOLUTION

The solution was conceptualized in a vibratory feeder, robot with interchangeable claws and adaptive tooling with automatic ejection.

Surpassing the customer's expectations, the IBERMACH cell increased the final productivity with a cycle time lower than estimated.

"The main advantage of this solution is its autonomy and versatility"

JOSEBA ETXEBERRIA IMAZ
CEO in Mendizabal S.A

ROBOTIC AUTOMATION OF A DRILLING AND PRESSING CELL

SECTOR

Automotive

APPLICATION

Drilling and die cutting of brake calipers.

PROJECT AIM

The solution aimed to improve productivity by integrating three different processes in the same cell: trepanado, pressing and marking.

SOLUTION

IBERMACH designed and manufactured a fully automated robotic cell that brings together all processes in a single compact cell.

In addition to reducing plant space, CIE reduced the costs of breakage and machine shut-down times by more than 60%.

"IBERMACH's solution, relationship and response has led us to consider purchasing the third transfer machine."

SANTIAGO GESTIDO
CEO in CIE DENAT

HYDRAULIC BROACHING MACHINE

SECTOR

Automotive

APPLICATION

Brushing of steering forks.

PROJECT AIM

Increase productivity in fork brushing to achieve a cycle time of 10 seconds per piece.

SOLUTION

IBERMACH designed an automatic broach machine capable of broaching 4 pieces at the same time, thus multiplying productivity by obtaining one piece every 4 seconds.

"It's our fifth broader despite the fact that they cost twice as much as those made in China."

"We prefer quality and reliability to risk and things go wrong"

FELIX LI

Production Manager in CSA YUBEI

HYDRAULIC PRESS WITH AUTOMATIC FEEDING

SECTOR

Wind Power

APPLICATION

Straightening of wind tower flanges.

PROJECT AIM

Gestamp was seeking to reduce tool costs and cycle times during flange turning.

SOLUTION

With two IBERMACH hydraulic presses, one in a vertical and one in a horizontal position, we can improve the circularity and flatness of the flanges before the turning process.

With this previous process, Gestamp reduced the cost per final part, thus increasing its profit.

“Esta solución nos ha permitido ahorrar en horas de proceso de torneado y gasto de herramienta.”

JOSU AGUIRRE ZUBIZARRETA
Technical department in Gestamp Renewable Industries

GRI Renewable Industries
